

Phase 5 Project Proposal

Wednesday, September 8, 2021

11:33 PM

What Is It:

This is a to-do app.

User Stories:

1. As a user, I can create, read, update, and delete to-do's.
2. As a user, I can read to-do's by their type.

Wireframes:

The wireframe is enclosed in a large rectangular border. At the top left, it says "User:" followed by a rectangular input box. Below this, it says "New To-Do:". Underneath "New To-Do:", there is a "Name:" label followed by a long horizontal input line, and a "Type" label followed by a dropdown menu icon (a triangle pointing down). Below the "Name:" input line is a button labeled "ADD To-DO". At the bottom of the wireframe is a table with three columns: "Type:", "To-Do:", and "Done:". The table contains four rows of data.

Type:	To-Do:	Done:
All	To-Do 1	<input type="checkbox"/>
Eating	To-Do 2	<input type="checkbox"/>
coding	To-Do 3	<input type="checkbox"/>
Misc	To-Do 4	<input type="checkbox"/>

coding	To-Do 3	<input type="checkbox"/>
Misc.	To-Do 4	<input type="checkbox"/>
	To-Do 5	<input type="checkbox"/>
	To-Do 6	<input type="checkbox"/>

User:

Update To-Do

Name:

Notes:

MVP:

The project's MVP is given by all of the above, with the 3 models being user(s), todo(s), and todo_type(s). Also, all additional project requirements as given will be fulfilled.

Stretch Features:

- (1) The project will be hosted.
- (2) Users will be able to log in and be able to only manipulate their to-do's.
- (3) Some to-do's will have trigger guides attached to them that will help the user get those tasks done.
- (4) To-do's will have times attached to them that will allow users to track lists of their completion status over time.
